Fast attendance
Made by Алға Қазақстан

Hello! We are Team Алға Қазақстан, and we would like to present our project: **Fast Attendance**.

In many events where student attendance is crucial, there are often difficulties in marking it quickly and accurately. Students often focus on this task instead of more important responsibilities, while organizers or team leaders of sports clubs prioritize attendance over organization.

To address this issue, we aim to develop a website that can identify individuals from a group photo and generate a CSV file containing the email addresses of each student. With our solution, students only need to register once on the site, and organizers only need to capture a single group photo, leaving the rest of the work to the application.

Our team
Danil Kuchukov (Data miner)
Artyom Makarov (ML engineer)
Timofey Didenko (team-lead, moral main writer)

Our progress
Although we came up with the idea only a few days ago, we have already made progress in finding a [relevant dataset](#) to evaluate the accuracy of our machine learning model, which will be responsible for recognizing faces and associating them with names.
